

The new nut coating by Friedberg for HV connections in steel constructions up to M36:

Groundbreaking improvements, especially in bolted connections, are not necessarily visible at first sight. A closer look is therefore recommended, because August Friedberg has developed **AF.PRO**, a new lubrication system for bolting systems that rocks.

- **AF.PRO** optimizes compliance with friction values
- **AF.PRO** prevents weather and contamination-induced delays at construction sites
- **AF.PRO** protects against weather-dependent moisture during transport and assembly
- **AF.PRO** facilitates faster processing through easier and lighter assembly
- **AF.PRO** provides additional safety, stability and extends the service life of the HV connection

Our nuts can also handle rain.
